About the conference organisers

The Institute of Indian Interior Designers (IIID) "LIGHT + DESIGN"

The Institute of Indian Interior Designers (IIID) is a very powerful organization created for development of skills and talent in designing for interior living. Their aim is to spread awareness about good design to the community, promote excellence in education and ethical conduct in practice. Members of IIID aim to Liaison between members and authorities. The members also act for the common benefit of the fraternity. They would like to encourage interaction between designers, affiliated professions, other artists and traders – for the benefit of the profession. IIID has very kindly agreed to hold a three half day workshop during the exhibition and during the balance three half days, they will take a guided tour of participants to the exhibition where IIID members' had undertaken to design for lighting for various applications and explain various concepts on lighting.

International SSL Alliance (ISA)

International Solid State Lighting Alliance (ISA) is an international and not-for-profit organization, registered in Hong Kong, aiming to promote the sustainable development and application of Solid State Lighting (SSL) worldwide. ISA currently has 76 members with more than 4,000 associated members, representing 70% of the output of global SSL industry. ISA members consists of almost all the major players of the global SSL community, including leading industry, academic and application entities. ISA has been bringing together the manufacturers of LED Lighting by organizing various seminars, workshops and exhibitions. The main aim is to impart and share LED technology and bring in a global understanding and following international standards for all to harmonize and adopt as one. ISA is holding a seminar in New Delhi during Light India exhibition in September 2014. They will invite more than 100 international participants and would like to invite interested Indian stake holder to join in the seminar

Global Lighting Association (GLA)

Global Lighting Association (GLA) The global voice of the lighting industry was established in 2007. The world of illumination is undergoing rapid transformation: from technology and innovation to energy efficiency and recycling. To most effectively address industry changes and establish a more proactive global presence, members concluded their organization needed to change as well. Originally founded in 2007 as the Global Lighting Forum (GLF), the new Global Lighting Association (GLA) represents the same members—but with a renewed focus and broader scope, and a willingness to be ever more active and influential participants in shaping how the world around us is lighted.

BUSINESS OF LIGHTING

The Business of Lighting Conference will explore the environment that will determine how lighting business is conducted in coming years. A host of experts and industry leaders will speak about the emerging opportunities in lighting, and also discuss the best growth strategies. This conference will interest investors and professionals who wish to gain a competitive edge in their lighting business, or who wish to diversify into this sector. (www.businessoflighting.com)

The conference is being organised by Sourcing Electricals & Lighting magazine, India's largest business magazine for the industry with readership of over 45,000 (www.sourcingelectricals.net).

The Energy & Resources Institute (TERI)

TERI was formally established in 1974 with the purpose of tackling and dealing with the immense and acute problems that mankind is likely to face within the years ahead on account of the gradual depletion of the earth's finite energy resources which are largely non-renewable and on account of the existing methods of their use which are polluting

Over the years the Institute has developed a wider interpretation of this core purpose and its application. Consequently, TERI has created an environment that is enabling, dynamic and inspiring for the development of solutions to global problems in the fields of energy, environment and current patterns of development, which are largely unsustainable. The Institute has grown substantially over the years, particularly, since it launched its own research activities and established a base in New Delhi. The Institute's growth has been evolutionary, driven by a vision of the future and rooted in challenges looming today, based on an approach that looks beyond the present and across the globe. Elcoma has invited TERI to organize the workshop which will benefit Indian stake holders in energy conservation and environment specialists.

Hotel accommodation

ELCOMA has been able to get very special hotel tariff from 4 best hotels in Delhi.
